III, Kaufman L.S.; (Cloning and characterisation of PGA1 and PGA2: two G protein alpha-subunits from pea that promote growth in the yeast Saccharowyees cerevisiae."; Plant J. 19:237-247(1999).
-!- FUNCTION: Guanine nucleotide-binding proteins (G proteins) are involved as modulators or transducers in various transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           signaling systems.
SUBUNIT: G proteins are composed of 3 units; alpha, beta and
gamma. The alpha chain contains the guanine nucleotide binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: Belongs to the G-alpha family. Subfamily 2 (G(s)).
                                                                                                                                                                                                                                                                                                                                                                  15-DEC-1998 (Rel. 37, Last sequence update)
15-MAR-2004 (Rel. 43, Last annotation update)
Guanine nucleotide-binding protein alpha-2 subunit (GP-alpha-2)
GPA2 OR GA2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

C -- CATALYTIC ACTIVITY: ATP + L-tryptophan + tRNA(Trp) = AMP +

Alphosphate + L-tryptophanyl-tRNA (Trp)

C -- SUBGINIT: Homodimer (By similarity)

C -- SUBGINIT: Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBCELIULAR LOCATION: Cytoplasmic.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

C -- SUBICART Belongs to class-I aminoacyl-tRNA synthetase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 J. Bacteriol. 185:2330-2337(2003).
-!- FUNCTION: Part of the ABC transporter complex modABC (TC 3.A.1.8)
involved in molybdenum import. Responsible for energy coupling to
the transport system (By similarity).
-!- CATALYTIC ACTIVITY: ATP + H(2)O + molybdate(Out) = ADP + phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  + molybdate(In).
-!- SUBUNIT: The complex is composed of two ATP-binding proteins (modd), two transmembrane proteins (modB) and a solute-binding protein (modA) (Probable).
-!- SUBCELLULAR LOCATION: Inner membrane-associated (By similarity).
-!- SUBCELLULAR LOCATION: Inner membrane-associated (By similarity).

                                                                                                                                                                                                                                                                                                                                                                                            Nature 413:852-856 (2001).
-!- FUNCTION: Part of the ABC transporter complex modABC (TC 3.A.1.8) involved in molybdenum import. Responsible for energy coupling to the transport system (By similarity).
-!- CATALYTIC ACTIVITY: ATP + H(2)O + molybdate(Out) = ADP + phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: Inner membrane-associated (By similarity). SIMILARITY: Belongs to the ABC transporter family. ModC subfamily.

    + molybdate(In).
    -!- SUBUNT: The complex is composed of two ATP-binding proteins (modC), two transmembrane proteins (modB) and a solute-binding protein (modA) (Probable).

                                                                                                                                                                   Salmonella typhimurium.

-!- SUBUNIT: G proteins are composed of 3 units; alpha, beta and
gamma. The alpha chain contains the guanine nucleotide binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein alpha subunit.";
Gene 107.189-195 (1991).
-!- FUNCTION: Guanine mucleotide-binding proteins (G proteins) are
involved as modulators or transducers in various transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SIMILARITY: Belongs to the G-alpha family. Subfamily 2 (G(s)).
                                                                                                                                                                                                                                                                                                                                                                                                                                                          STRAIN=cv.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 2, Apsequence 95, 7

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Species: Mus musculus (house mouse)
C;Accession: A02144
R;Liu, F:I; Albrandt, K.; Sutcliffe J.G.; Katz, D.H.
Proc. Natl. Acad. Sci. U.S.A. 79, 7882-7886, 1892
A;Title: Cloning and nuclectide sequence of mouse immunoglobulin epsilon chain cDNA.
A;Reference number: A02144; MUID:83117774; PMID:6818553
A;Title: Cloning and nuclectide sequence of mouse immunoglobulin consists
A;Residues: 1-388 «LIU»
C;Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap hain disulfide bonds. In mome cases, such as IgA and IgM, the subunits associate into la C;Complex: An immunoglobulin c region; immunoglobulin homology (fragment)
C;Complex: An immunoglobulin homology (fragment)
